

DAC0800/DAC0801/DAC0802 8-Bit Digital-to-Analog Converters

General Description

The DAC0800 series are monolithic 8-bit high-speed current-output digital-to-analog converters (DAC) featuring typical settling times of 100 ns. When used as a multiplying DAC, monotonic performance over a 40 to 1 reference current range is possible. The DAC0800 series also features high compliance complementary current outputs to allow differential output voltages of 20 Vp-p with simple resistor loads as shown in *Figure 1*. The reference-to-full-scale current matching of better than ± 1 LSB eliminates the need for full-scale trims in most applications while the nonlinearities of better than $\pm 0.1\%$ over temperature minimizes system error accumulations.

The noise immune inputs of the DAC0800 series will accept TTL levels with the logic threshold pin, V_{LC} , grounded. Changing the V_{LC} potential will allow direct interface to other logic families. The performance and characteristics of the device are essentially unchanged over the full $\pm 4.5V$ to $\pm 18V$ power supply range; power dissipation is only 33 mW with $\pm 5V$ supplies and is independent of the logic input states.

The DAC0800, DAC0802, DAC0800C, DAC0801C and DAC0802C are a direct replacement for the DAC-08, DAC-08A, DAC-08E, DAC-08E and DAC-08H, respectively.

Features

Fast settling output current	100 ns
Full scale error	±1 LSB
Nonlinearity over temperature	$\pm 0.1\%$
Full scale current drift	\pm 10 ppm/°C
High output compliance	-10V to $+18V$
Complementary current outputs	
Interface directly with TTL, CMOS, PM	OS and others
2 quadrant wide range multiplying capa	ability
Wide power supply range	$\pm4.5V$ to $\pm18V$
Low power consumption	33 mW at \pm 5V
Low cost
