

4-PORT LVDS AND 4-PORT TTL-TO-LVDS REPEATERS

FEATURES

- Receiver and Drivers Meet or Exceed the Requirements of ANSI EIA/TIA-644 Standard
 - SN65LVDS105 Receives Low-Voltage TTL (LVTTTL) Levels
 - SN65LVDS104 Receives Differential Input Levels, ± 100 mV
- Typical Data Signaling Rates to 400 Mbps or Clock Frequencies to 400 MHz
- Operates From a Single 3.3-V Supply
- Low-Voltage Differential Signaling With Typical Output Voltage of 350 mV and a 100- Ω Load
- Propagation Delay Time
 - SN65LVDS105 – 2.2 ns (Typ)
 - SN65LVDS104 – 3.1 ns (Typ)
- LVTTTL Levels Are 5-V Tolerant
- Electrically Compatible With LVDS, PECL, LVPECL, LVTTTL, LVCMOS, GTL, BTL, CTT, SSTL, or HSTL Outputs With External Networks
- Driver Outputs Are High Impedance When Disabled or With $V_{CC} < 1.5$ V
- Bus-Pin ESD Protection Exceeds 16 kV
- SOIC and TSSOP Packaging

DESCRIPTION

The SN65LVDS104 and SN65LVDS105 are a differential line receiver and a LVTTTL input (respectively) connected to four differential line drivers that implement the electrical characteristics of low-voltage differential signaling (LVDS). LVDS, as specified in EIA/TIA-644 is a data signaling technique that offers low-power, low-noise coupling, and switching speeds to transmit data at relatively long distances. (Note: The ultimate rate and distance of data transfer is dependent upon the attenuation characteristics of the media, the noise coupling to the environment, and other system characteristics.)

The intended application of this device and signaling technique is for point-to-point baseband data transmission over controlled impedance media of approximately 100 Ω . The transmission media may be printed-circuit board traces, backplanes, or cables. Having the drivers integrated into the same substrate, along with the low pulse skew of balanced signaling, allows extremely precise timing alignment of the signals repeated from the input. This is particularly advantageous in distribution or expansion of signals such as clock or serial data stream.

logic diagram (positive logic)

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

These devices have limited built-in ESD protection. The leads should be shorted together or the device placed in conductive foam during storage or handling to prevent electrostatic damage to the MOS gates.

DESCRIPTION (CONTINUED)

The SN65LVDS104 and SN65LVDS105 are characterized for operation from -40°C to 85°C .

The SN65LVDS104 and SN65LVDS105 are members of a family of LVDS repeaters. A brief overview of the family is provided in the table below.

Selection Guide to LVDS Repeaters

DEVICE	NO. INPUTS	NO. OUTPUTS	PACKAGE	COMMENT
SN65LVDS22	2 LVDS	2 LVDS	16-pin D	Dual multiplexed LVDS repeater
SN65LVDS104	1 LVDS	4 LVDS	16-pin D	4-Port LVDS repeater
SN65LVDS105	1 LVTTTL	4 LVDS	16-pin D	4-Port TTL-to-LVDS repeater
SN65LVDS108	1 LVDS	8 LVDS	38-pin DBT	8-Port LVDS repeater
SN65LVDS109	2 LVDS	8 LVDS	38-pin DBT	Dual 4-port LVDS repeater
SN65LVDS116	1 LVDS	16 LVDS	64-pin DGG	16-Port LVDS repeater
SN65LVDS117	2 LVDS	16 LVDS	64-pin DGG	Dual 8-port LVDS repeater

Function Tables⁽¹⁾

ABSOLUTE MAXIMUM RATINGS

over operating free-air temperature range (unless otherwise noted) ⁽¹⁾

		UNIT
Supply voltage range, V_{CC} ⁽²⁾		–0.5 to 4 V
Voltage range	Enables, A ('LVDS105)	–0.5 to 6 V
	A, B, Y or Z	–0.5 to 4 V
Electrostatic discharge ⁽³⁾	A, B, Y, Z, and GND	Class 3, A:16 kV, B: 400 V
Continuous power dissipation		See Dissipation Rating Table
Storage temperature range		–65°C to 150°C
Lead temperature 1,6 mm (1/16 inch) from case for 10 seconds		260°C

- (1) Stresses beyond those listed under *absolute maximum ratings* may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under *recommended operating conditions* is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) All voltage values, except differential I/O bus voltages, are with respect to network ground terminal.
- (3) Tested in accordance with MIL-STD-883C Method 3015.7

DISSIPATION RATING TABLE

PACKAGE	$T_A \leq 25^\circ\text{C}$ POWER RATING	OPERATING FACTOR ⁽¹⁾ ABOVE $T_A = 25^\circ\text{C}$	$T_A = 85^\circ\text{C}$ POWER RATING
D	950 mW	7.6 mW/°C	494 mW
PW	774 mW	6.2 mW/°C	402 mW

- (1) This is the inverse of the junction-to-ambient thermal resistance when board-mounted (low-k) and with no air flow.

RECOMMENDED OPERATING CONDITIONS

		MIN	NOM	MAX	UNIT
V_{CC}	Supply voltage	3	3.3	3.6	V
V_{IH}	High-level input voltage	2			V
V_{IL}	Low-level input voltage			0.8	V
V_I or V_{IC}	Voltage at any bus terminal (separately or common-mode)	0		$V_{CC}-0.8$	
T_A	Operating free-air temperature	–40		85	°C

over recommended operating conditions (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP ⁽¹⁾	MAX	UNIT
V _{IT+}	Positive-going differential input voltage threshold	See Figure 1 and Table 1			100	mV
V _{IT-}	Negative-going differential input voltage threshold		-100			
V _{OD}	Differential output voltage magnitude	R _L = 100 Ω, V _{ID} = ± 100 mV, See Figure 1 and Figure 2	247	340	454	mV
Δ V _{OD}	Change in differential output voltage magnitude between logic states		-50		50	
V _{OC(SS)}	Steady-state common-mode output voltage	See Figure 3	1.125		1.375	V
ΔV _{OC(SS)}	Change in steady-state common-mode output voltage between logic states		-50		50	mV
V _{OC(PP)}	Peak-to-peak common-mode output voltage			25		150
I _{CC}	Supply current	Enabled, R _L = 100 Ω		23	35	mA
		Disabled		3	8	
I _I	Input current (A or B inputs)	V _I = 0 V	-2	-11	-20	μA
		V _I = 2.4 V	-1.2	-3		
I _{I(OFF)}	Power-off Input current	V _{CC} = 1.5 V, V _I = 2.4 V			20	μA
I _{IH}	High-level input current (enables)	V _{IH} = 2 V			20	μA
I _{IL}	Low-level input current (enables)	V _{IL} = 0.8 V			10	μA
I _{OS}	Short-circuit output current	V _{OY} or V _{OZ} = 0 V			±10	mA
		V _{OD} = 0 V			±10	
I _{OZ}	High-impedance output current	V _O = 0 V or 2.4 V			±1	μA
I _{O(OFF)}	Power-off output current	V _{CC} = 1.5 V, V _O = 2.4 V			±1	μA
C _{IN}	Input capacitance (A or B inputs)	V _I = 0.4 sin(4E6πt) + 0.5 V		3		pF
C _O	Output capacitance (Y or Z outputs)	V _I = 0.4 sin(4E6πt) + 0.5 V, Disabled		9.4		pF

(1) All typical values are at 25°C and with a 3.3-V supply.

SN65LVDS104 SWITCHING CHARACTERISTICS

over recommended operating conditions (unless otherwise noted)

PARAMETER		TEST CONDITIONS	MIN	TYP ⁽¹⁾	MAX	UNIT
t _{PLH}	Propagation delay time, low-to-high-level output	R _L = 100 Ω, C _L = 10 pF, See Figure 4	2.4	3.2	4.2	ns
t _{PHL}	Propagation delay time, high-to-low-level output		2.2	3.1	4.2	ns
t _r	Differential output signal rise time		0.3	0.8	1.2	ns
t _f	Differential output signal fall time		0.3	0.8	1.2	ns
t _{sk(p)}	Pulse skew (t _{PHL} - t _{PLH})			150	500	ps
t _{sk(o)}	Channel-to-channel output skew ⁽²⁾			20	100	ps
t _{sk(pp)}	Part-to-part skew ⁽³⁾			1.5	ns	
t _{pZH}	Propagation delay time, high-impedance-to-high-level output	See Figure 5		7.2	15	ns
t _{pZL}	Propagation delay time, high-impedance-to-low-level output			8.4	15	ns
t _{pHZ}	Propagation delay time, high-level-to-high-impedance output			3.6	15	ns
t _{pLZ}	Propagation delay time, low-level-to-high-impedance output			6	15	ns

(1) All typical values are at 25°C and with a 3.3-V supply.

(2) t_{sk(o)} is the magnitude of the time difference between the t_{PLH} or t_{PHL} of all drivers of a single device with all of their inputs connected together.

(3) t_{sk(pp)} is the magnitude of the difference in propagation delay times between any specified terminals of two devices when both devices operate with the same supply voltages, at the same temperature, and have identical packages and test circuits.

APPLICATION INFORMATION (continued)

FAIL SAFE

A common problem with differential signaling applications is how the system responds when no differential voltage is present on the signal pair. The LVDS receiver is like most differential line receivers, in that its output logic state can be indeterminate when the differential input voltage is between -100 mV and 100 mV and within its recommended input common-mode voltage range. However, TI LVDS receivers handles the open-input circuit situation differently.

Open-circuit means that there is little or no input current to the receiver from the data line itself. This could be when the driver is in a high-impedance state or the cable is disconnected. When this occurs, the LVDS receiver pulls each line of the signal pair to near V_{CC} through $300\text{-k}\Omega$ resistors as shown in Figure 33. The fail-safe feature uses an AND gate with input voltage thresholds at about 2.3 V to detect this condition and force the output to a high-level regardless of the differential input voltage.

Figure 33. Open-Circuit Fail Safe of the LVDS Receiver

It is only under these conditions that the output of the receiver will be valid with less than a 100 mV differential input voltage magnitude. The presence of the termination resistor, R_t , does not affect the fail-safe function as long as it is connected as shown in Figure 33. Other termination circuits may allow a dc current to ground that could defeat the pullup currents from the receiver and the fail-safe feature.

⁽¹⁾ The marketing status values are defined as follows:

ACTIVE: Product device recommended for new designs.

LIFEBUY: TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

NRND: Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

PREVIEW: Device has been announced but is not in production. Samples may or may not be available.

OBSELETE: TI has discontinued the production of the device.

⁽²⁾ Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

TBD: The Pb-Free/Green conversion plan has not been defined.

Pb-Free (RoHS): TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

Pb-Free (RoHS Exempt): This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

Green (RoHS & no Sb/Br): TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

⁽³⁾ MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

 - D. Body width does not include interlead flash. Interlead flash shall not exceed .017 (0,43) per side.
 - E. Reference JEDEC MS-012 variation AC.

PW (R-PDSO-G**)

PLASTIC SMALL-OUTLINE PACKAGE

14 PINS SHOWN

4040064/F 01/97

- NOTES: A. All linear dimensions are in millimeters.
 B. This drawing is subject to change without notice.
 C. Body dimensions do not include mold flash or protrusion not to exceed 0,15.
 D. Falls within JEDEC MO-153

IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.
