

3A DUAL HIGH-SPEED POWER MOSFET DRIVERS

FEATURES

- High Peak Output Current 3A
- Wide Operating Range 4.5V to 18V
- High Capacitive Load
Drive Capability 1800 pF in 25nsec
- Short Delay Times < 40nsec Typ
- Matched Rise/Fall Times
- Low Supply Current
— With Logic "1" Input 3.5 mA
— With Logic "0" Input 350 μ A
- Low Output Impedance 3.5 Ω Typ
- Latch-Up Protected . Will Withstand 1.5A Reverse Current
- Logic Input Will Withstand Negative Swing Up to 5V
- ESD Protected 4 kV
- Pinouts Same as TC1426/27/28; TC4426/27/28

GENERAL DESCRIPTION

The TC4423/4424/4425 are higher output current versions of the new TC4426/4427/4428 buffer/drivers, which, in turn, are improved versions of the earlier TC426/427/428 series. All three families are pin-compatible. The TC4423/4424/4425 drivers are capable of giving reliable service in far more demanding electrical environments than their antecedents.

Although primarily intended for driving power MOSFETs, the TC4423/4424/4425 drivers are equally well-suited to driving any other load (capacitive, resistive, or inductive) which requires a low impedance driver capable of high peak currents and fast switching times. For example, heavily loaded clock lines, coaxial cables, or piezoelectric transducers can all be driven from the TC4423/4424/4425. The only known limitation on loading is the total power dissipated in the driver must be kept within the maximum power dissipation limits of the package.

*Static-sensitive device. Unused devices must be stored in conductive material. Protect devices from static discharge and static fields. Stresses above those listed under Absolute Maximum Ratings (See page 2) may cause permanent damage to the device. These are stress ratings only and functional operation of the device at these or any other conditions above those indicated in the operational sections of the specifications is not implied. Exposure to Absolute Maximum Rating Conditions for extended periods may affect device reliability.
