68-DOT COMMON DRIVER

## GENERAL DESCRIPTION

The MSM5298A is a dot matrix LCD common driver LSI which is fabricated using low power CMOS metal gate technology. This LSI consists of 68-bit bidirectional shift register, 68 -bit level shifter and 68-bit 4-level driver.
This LSI has 68 output pins to be connected to the LCD. By connecting two or more MSM5298As in series, this LSI is applicable to a wide LCD panel.

## FEATURES

- Supply voltage : 4.5 to 5.5 V
- LCD driving voltage : 8 to 28 V
- Applicable LCD duty : $1 / 64$ to $1 / 256$
- Applicable segment driver : MSM5299A (80 outputs), MSM5299C (80 outputs)
- Package options:

80-pin plastic QFP (QFP80-P-1420-0.80-K) (Product name : MSM5298AGS-K)
80-pin plastic QFP (QFP80-P-1420-0.80-BK) (Product name : MSM5298AGS-BK)

## FUNCTIONAL DESCRIPTION

## Pin Functional Description

- $1 \mathrm{O}_{1}, \mathrm{IO}_{68}, \mathrm{SHL}$
$\mathrm{IO}_{1}$ and $\mathrm{IO}_{68}$ are 68 -bit bidirectional shift register input/output pins. The shifting direction is selected by the SHL pin. Refer to the table below.

| SHL | Shifting direction | 101/1068 | Input/ output | Description |
| :---: | :---: | :---: | :---: | :---: |
| L | $0_{1} \rightarrow 0_{68}$ | $10_{1}$ | Input | The scanning data from the LCD controller LSI is input into $\mathrm{IO}_{1}$ synchronized with the clock pulse.* ${ }^{1}$ |
|  |  | $10_{68}$ | Output | Shift register contents output pin. The data which is input into $\mathrm{IO}_{1}$ is output from $\mathrm{IO}_{68}$ with 68 bit's delay, synchronized with the clock pulse. |
| H | $\mathrm{O}_{68} \rightarrow \mathrm{O}_{1}$ | $10_{68}$ | Input | The scanning data from the LCD controller LSI is input into $\mathrm{IO}_{68}$ synchronized with the clock pulse.*1 |
|  |  | $10_{1}$ | Output | Shift register contents output pin. The data which is input into $\mathrm{IO}_{68}$ is output from $\mathrm{IO}_{1}$ with 68 bit's delay, synchronized with the clock pulse. |

*1 The combination of the scanning data, $\mathrm{IO}_{1}$ or $\mathrm{IO}_{68}$, and the LCD driving output, $\mathrm{O}_{1}$ to $\mathrm{O}_{68}$, is shown in the table below.

| $\mathbf{I O}_{\mathbf{1}}, \mathbf{I O}_{\mathbf{6 8}}$ | LCD driving output |  |
| :---: | :---: | :---: |
| "H" | Select level $\quad\left(\mathrm{V}_{1}, \mathrm{~V}_{\text {EE }}\right)$ |  |
| "L" | Non-select level $\quad\left(\mathrm{V}_{2}, \mathrm{~V}_{5}\right)$ |  |

- CP

Clock pulse input pin for 68 -bit bidirectional shift register. The data is shifted to 68 -bit bidirectional shift register at the falling edge of the clock pulse.

- DF

Alternate signal input pin for LCD driving.

- $\mathrm{V}_{\mathrm{DD}}, \mathrm{V}_{\mathrm{SS}}$

Supply voltage pins. $\mathrm{V}_{\mathrm{DD}}$ should be 4.5 to $5.5 \mathrm{~V} . \mathrm{V}_{\text {SS }}$ is a ground pin. $\left(\mathrm{V}_{\mathrm{SS}}=0 \mathrm{~V}\right)$.

- DISP OFF

Control input pin for display data output level $\left(\mathrm{O}_{1}\right.$ to $\left.\mathrm{O}_{68}\right)$. $\mathrm{V}_{1}$ level is output from $\mathrm{O}_{1}$ to $\mathrm{O}_{68}$ pin during "L" level input. Refer to Truth Table.

- $\mathbf{v}_{1}, \mathbf{v}_{2}, \mathbf{v}_{5}, \mathbf{v}_{\mathrm{EE}}$

Bias supply voltage pins to drive the $L C D$. The $V_{1}$ pin can be separated from the $V_{D D}$ pin.

- $\mathrm{O}_{1}-\mathrm{O}_{68}$

Display data output pins which correspond to each bit of the 68-bit bidirectional shift register. One of the four levels, $V_{1}, V_{2}, V_{5}$ and $V_{E E}$, is selected based on the combination of the latched data level and DF signal. (Refer to Truth Table.)
Connect these outputs to the common side of the LCD panel.

## NOTES ON USE (when turning the power ON or OFF)

The LCD drivers of this IC require a high voltage. For this reason, if a high voltage is applied to the LCD drivers with the logic power supply floating, excess current flows. This may damage the IC.
Be sure to follow the sequence below when turning the power ON or OFF.
Power ON : Logic circuits ON $\rightarrow$ LCD drivers ON, or both ON at a time
Power OFF : LCD drivers OFF $\rightarrow$ logic circuits OFF, or both OFF at a time

Notes for Mounting the Surface Mount Type Package
The SOP, QFP, TSOP, SOJ, QFJ (PLCC), SHP and BGA are surface mount type packages, which are very susceptible to heat in reflow mounting and humidity absorbed in storage.
Therefore, before you perform reflow mounting, contact Oki's responsible sales person for the product name, package name, pin number, package code and desired mounting conditions (reflow method, temperature and times).
